

TESTING FOR COVID

3 DIFFERENT TESTS

RT-PCR

- Detects genetic material of the virus
- In theory can detect one virion in a sample

Lateral Flow

- Detects whether the virus is on a swab.
- Gives results in as little as 15 minutes

**“Have you got it?”
Active infection test**

Antibody

- Detects whether a person has antibodies for the virus
- Can be used in order to see whether someone has immunity

**“Have you had it?”
Past infection test**
